RESPONSE

The Examiner objected to FIGs. 6 and 8 finding that it is not clear how branching is determined. Applicants traverse the objection with respect to FIG. 6 and amend the Specification and FIG. 8 to overcome the objection with respect to FIG. 8.

FIG. 6 shows a flow of operations from blocks 200-222, which is described in the specification at paragraphs [0020] through [0022] on pgs. 7-8 of the Specification. However, FIG. 6 also shows three branches resulting from three different calls. At block 216, the call to the archive manager invokes the operations at blocks 240-256, where the operations at blocks 254 and 256 are invoked by the call to the content mover locator at block 244. At block 218, the call to the content mover invokes the operations at blocks 250 and 252. Thus, blocks having two branches, such as blocks 216 and 218, have one branch to the operations performed in response to the call and another branch to the operations that follow the call. Thus, the arrow from block 216 to block 218 shows the continuation of the general flow following the call and the arrow to block 240 links the call to the operations that implement that call. Similarly, the arrow from block 218 to block 220 shows the continuation of the general flow following the call and the arrow to block 250 links the call to the operations that implement that call.

Applicants amended FIG. 8 to add block 303 for receiving the returned location that is disclosed on pg. 10, line 14 of the Specification.

Applicants amended FIG. 8 to extend the arrow from block 324 to the new block 303 at which the returned location is received as disclosed on pg. 10, line 14 of the Specification.

Applicants amended FIG. 8 to include an arrow from block 304 to block 326 to link the call to the archive manager at block 304 to the archive manager operations that begin at block 326.

Applicants amended paragraph [0026] to include a reference to the added block 303 and include references to blocks 326 and 330 shown in FIG. 8.

As with FIG. 6, in FIG. 8 arrows extend from a call to the operations performed by that call, such as from block 302 to block 320, from block 304 to block 326, and from block 310 to block 340. Moreover, blocks 302 and 304 include two arrows, one from the call to the operations performed by the call and another to the next operation in the flow following the call.

Applicants submit that these arguments and amendments overcome the objections to the drawings.

The attorney of record invites the Examiner to contact him at (310) 553-7977 if the Examiner believes such contact would advance the prosecution of the case.

Applicants submit that no additional fee is needed for this response. Nonetheless, should any additional fees be required, please charge Deposit Account No. 09-0460.
